

ASSIGNMENT TWO

CLICKUP SOLUTION DESIGN

Nordvik Consulting

Item	Value
Platform	ClickUp
Workspace	Nordvik Consulting
Evidence checked	20 September 2026
Required screenshots	10

FINAL HEADLINE NUMBERS	
Total Hours Variance	23 hours
Total WIP Hours	132 hours
Total WIP Value	\$19,790

Executive Summary

This report documents the completed Nordvik Consulting ClickUp billing/work-management demonstration, including the configured workspace hierarchy, billing calculations, reporting views, AI testing, plan research, feasibility assessment and commercial quote.

Requirement	Final verdict
R1 — Hours Variance	CONFIGURATION
R2 — WIP Reporting	CONFIGURATION
R3 — e-economic Accounting Sync	CUSTOM BUILD
R4 — Country-specific Utilisation	CUSTOM BUILD
R5 — Pricing	NATIVE

Working Evidence

Metric	Observed result
Total Hours Variance	23 hours
Total WIP Hours	132 hours
Total WIP Value	\$19,790
Integration design variance	8 hours
Integration design WIP	\$0 because already invoiced

Important: The report distinguishes native capabilities, configuration/workarounds, custom/third-party work and unverified AI capabilities. No paid ClickUp subscription was purchased.

Feasibility Assessment

Client: Nordvik Consulting

Executive result

Requirement	Verdict	Evidence
R1 — Hours Variance	CONFIGURATION	Number Custom Fields + Formula Field; Dashboard Calculation used for total. Free plan blocked aggregate Column Calculations; Business trial enabled the required calculation/reporting capability.
R2 — WIP reporting	CONFIGURATION	Formula Fields + Invoice Status helper automation + filtered WIP view + Dashboard Calculation.
R3 — Accounting integration with e-economic	CUSTOM BUILD	No native e-economic billing flow was identified in ClickUp's native integration catalogue. ClickUp provides API/webhooks; a third-party integration platform or custom API service can implement the required flow.
R4 — Per-country holiday calendars and utilisation	CUSTOM BUILD	Calendar can display national holidays, but Workspace Work Schedule drives capacity and does not provide independent Denmark/India/Sweden utilisation calendars in one Workspace. Advanced Work Schedules were also locked behind Business Plus in the test.
R5 — Pricing	NATIVE	ClickUp provides plan pricing and billing-cycle choices. Implementation, custom integration and support are separate commercial estimates rather than ClickUp license fees.

R1 — Hours Variance

Requirement: Worked Hours minus Approved Hours, with a report total.

Observed implementation

- Worked Hours — Number
- Approved Hours — Number
- Hours Variance — Formula: Worked Hours - Approved Hours
- Dashboard Calculation card: Sum of Hours Variance = **23**

Verdict: CONFIGURATION

The calculation itself is native to ClickUp Formula Fields, but the customer must configure the Custom Fields, formula and reporting view/card. The Free Forever plan did not expose Column Calculations; the Business trial did.

Customer-facing sentence

ClickUp can calculate hours variance natively once the billing fields and formula are configured; the management total requires a plan with the required calculation/reporting capability.

R2 — WIP reporting

Requirement: Approved hours × hourly rate for jobs not yet invoiced; invoiced jobs must show zero WIP.

Observed implementation

- Invoice Status — Dropdown
- Invoiced Flag — Number helper
- WIP Hours — Formula
- WIP — Formula
- Two Automations keep Invoiced Flag aligned with Invoice Status
- WIP Report filters out Invoiced tasks
- Dashboard Calculation cards return **132 WIP hours** and **19,790 WIP value**

Verdict: CONFIGURATION

The formula and views are native, but the status-to-formula link required a helper field and Automations because ClickUp Formula Fields do not directly support text Custom Fields.

Customer-facing sentence

ClickUp can run the WIP calculation, but the billing workflow needs a small configuration layer using a numeric helper field and Automations.

R3 — e-economic accounting integration

Requirement: Push invoice data from ClickUp to e-economic and write the returned invoice number back into ClickUp.

Research

- ClickUp's native integrations catalogue was reviewed; no native e-economic connector was identified.
- ClickUp provides API/webhook capabilities suitable for custom integrations.
- e-economic provides OpenAPI/REST APIs for invoice operations.
- Make provides a ClickUp + e-economic integration path.

Verdict: CUSTOM BUILD

A third-party/no-code integration or custom API service appears technically feasible, but the workflow is not a native ClickUp accounting feature and was not executed against a live e-economic account in this assignment.

Customer-facing sentence

ClickUp does not provide the required e-economic accounting flow as a native billing feature; the integration should be implemented through a supported integration platform or a custom API service, with controlled write-back of the e-economic invoice number.

R4 — Country holiday calendars and utilisation

Requirement: Denmark, India and Sweden have different public holidays, and utilisation should respect each employee's country calendar.

Observed / researched

- ClickUp Calendar can display national holiday calendars.
- Workload availability/capacity uses the Workspace work schedule.
- Workspace holidays/custom non-working days create zero-capacity days.
- ClickUp's Work Schedule does not provide independent country-specific capacity calendars for three employee groups inside one Workspace.
- The Nordvik test showed Advanced Work Schedules unavailable on the tested plan and indicated Business Plus as the upgrade boundary.

Verdict: CUSTOM BUILD

The exact business requirement is not satisfied natively by one Workspace work schedule.

Customer-facing sentence

ClickUp can display country holidays, but automatic utilisation based on three different country calendars requires a workaround or custom capacity/integration layer.

R5 — Pricing

Requirement: Cost for 39 people, plan, one-time costs and recurring costs beyond licenses.

Verdict: NATIVE

ClickUp supplies the license pricing and billing-cycle choices. The implementation, custom integration and ongoing support are separate delivery estimates and are not ClickUp fees.

Overall implementation boundary

The ClickUp platform can run the demonstrated billing calculations and reporting once configured.

The two material gaps are:

1. e-conomic accounting synchronisation is not a native ClickUp billing flow.
2. Independent country-specific utilisation calendars are not provided by a single Workspace work schedule.

The build therefore demonstrates a workable ClickUp billing layer, but not a completely native end-to-end accounting and multinational utilisation system.

Key evidence

- Total Hours Variance: **23**
- Total WIP Hours: **132**
- Total WIP Value: **19,790**
- Integration design variance: **8 hours**, but WIP **0** because it is already invoiced.
- Dynamic status test: Build phase 1 changed Ready to Invoice → Invoiced → WIP 0, then restored to Ready to Invoice → WIP \$3,750.

Plan Comparison

Client: Nordvik Consulting **Workspace:** Nordvik Consulting

Evidence standard: VERIFIED = directly supported by current ClickUp documentation and/or the Nordvik workspace test.
DOCUMENTED = supported by ClickUp documentation but packaging/availability needs workspace confirmation.
UNVERIFIED = not sufficiently verified for the Nordvik workspace.

Executive summary

The Nordvik build was successfully tested during the Business trial. The current workspace uses ClickUp's newer **Early access** plan structure, where AI is shown as included in the plan cards.

For the plan comparison, the current documented tier structure is treated as:

- Free Forever
- Core
- Business
- Business Plus
- Enterprise
- Max

The Nordvik workspace pricing screen directly showed Business, Business Plus, Enterprise and MAX. Core pricing was not captured in the Nordvik workspace and is therefore not invented.

The older public AI add-on model still appears in some ClickUp documentation, so workspace-observed pricing is kept separate from legacy/public add-on pricing.

Plan tier coverage

Plan	Nordvik workspace evidence	Status
Free Forever	Workspace initially showed Free Forever, 1 seat, \$0/seat	VERIFIED
Core	Current ClickUp new-plan documentation confirms the tier; exact Nordvik price was not captured	DOCUMENTED / UNVERIFIED for Nordvik pricing
Business	Workspace showed \$24/user/month monthly and \$16/user/month billed yearly	VERIFIED
Business Plus	Workspace showed \$36/user/month monthly and \$24/user/month billed yearly	VERIFIED
Enterprise	Workspace showed Custom pricing	VERIFIED — Custom pricing
Max	Workspace showed \$120/user/month monthly and \$100/user/month billed yearly	VERIFIED for Nordvik workspace pricing

Plan comparison matrix

Area	Claim / evidence	Status	Source / evidence	Date checked
Automations	Free: 5 active / 100 actions per month; Unlimited: 500 / 1,000; Business: unlimited / 5,000; Business Plus: unlimited / 25,000; Enterprise: unlimited / 250,000	VERIFIED	ClickUp Help — Automations	
API rate limit	Free 100 requests/min/token; Unlimited 100; Business 100; Business Plus 1,000; Enterprise 10,000	VERIFIED	ClickUp Developer Docs — Rate Limits	
Custom Fields	Free: 60 uses; Unlimited+: unlimited. Business can pin fields; Business Plus/Enterprise provide advanced management capabilities	VERIFIED	ClickUp Help — Custom Fields	
Dashboards	Dashboard feature exists across plans with plan-based limits; advanced Dashboard cards are available on Business+; Business trial supported the Calculation cards used for Nordvik	VERIFIED	ClickUp Help — Dashboards / workspace test	
Workload	Free 60 uses; Unlimited 100; Business unlimited; Business Plus/Enterprise add advanced capacity controls such as per-day capacity and no-capacity days	VERIFIED	ClickUp Help — Workload	
Timesheets / time tracking	Free/Unlimited/Business have increasing limits; Business has 100 advanced time-tracking uses and 100 timesheet approvals; Business Plus/Enterprise have unlimited advanced time tracking and approvals plus additional custom-role permissions	VERIFIED	ClickUp Help — Time Tracking	
Guests / permissions	Paid plans support view-only and permission-controlled guests; permission-controlled guests are governed by plan guest-seat ratios and can consume paid seats when allowances are exhausted	VERIFIED	ClickUp Help — Guest roles / pricing	
Custom roles	Not available on Free, Unlimited or Business; available on Business Plus and Enterprise	VERIFIED	ClickUp Help — User roles / Nordvik screenshot #10	
Forms	Forms available on all plans. Free has one Form; Unlimited+ unlimited. Advanced logic/options/hidden fields start at Business Plus; authenticated Forms are Enterprise	VERIFIED	ClickUp Help — Forms	
Security / SSO	Google SSO available on Business+; Microsoft, Okta and SAML available on Enterprise. Nordvik Business screen also showed Google SSO + SMS 2FA	VERIFIED	ClickUp Help — SSO / workspace plan screen	
Support	24/7 support is available on all plans; Priority Support is Business Plus and Enterprise	VERIFIED	ClickUp Help — Support resources	
AI packaging	ClickUp documents newer plans with more AI included. Nordvik showed AI included in Business, Business Plus, Enterprise and MAX	VERIFIED	ClickUp Help — New plans / Nordvik Plans screen	
MAX plan	Nordvik workspace showed MAX at \$100/user/month billed yearly and \$120/user/month billed monthly	VERIFIED	Nordvik workspace Plans screen	
Legacy/public AI add-on pricing	ClickUp documentation still describes separate Brain/Everything AI add-ons, but Nordvik did not expose an Add-ons tab and showed AI bundled into plans	DOCUMENTED	ClickUp AI add-on docs + Nordvik workspace	
Exact Enterprise price	Enterprise price was displayed as Custom in the Nordvik workspace	VERIFIED	Nordvik workspace Plans screen	
Monthly/yearly pricing	Nordvik: Business \$24 monthly / \$16 yearly; Business Plus \$36 monthly / \$24 yearly; MAX \$120 monthly / \$100 yearly; Enterprise Custom	VERIFIED	Nordvik workspace Plans screen	

Pricing observed in the Nordvik workspace

Monthly billing

- Business — \$24/user/month
- Business Plus — \$36/user/month
- Enterprise — Custom
- MAX — \$120/user/month

Yearly billing

- Business — \$16/user/month billed yearly
- Business Plus — \$24/user/month billed yearly
- Enterprise — Custom
- MAX — \$100/user/month billed yearly

The workspace billing screen showed Business as the active trial and no payment method was configured.

39-user license calculations

Plan	Monthly billing	Annualised monthly-billing cost	Yearly billing	Annual cost on yearly billing
Business	\$24/user/mo	\$11,232	\$16/user/mo	\$7,488
Business Plus	\$36/user/mo	\$16,848	\$24/user/mo	\$11,232
Enterprise	Custom	Custom	Custom	Custom
MAX	\$120/user/mo	\$56,160	\$100/user/mo	\$46,800

Yearly-billing savings versus monthly billing

Plan	Monthly-billing annualised	Yearly-billing annual total	Difference
Business	\$11,232	\$7,488	\$3,744
Business Plus	\$16,848	\$11,232	\$5,616
MAX	\$56,160	\$46,800	\$9,360

Enterprise is not calculable without a sales quote.

Key implications for Nordvik

Billing build

The tested billing solution requires Formula Fields, Automations and Dashboard Calculation cards. The Free Forever workspace blocked Column Calculations, while the Business trial successfully calculated **23, 132 and 19,790**.

API / accounting integration

ClickUp's API limits increase materially at Business Plus and Enterprise:

- Business — 100 requests/minute per token
- Business Plus — 1,000
- Enterprise — 10,000

This matters if a custom accounting integration becomes high-volume.

Resource planning

Business provides unlimited Workload usage, while Business Plus/Enterprise add advanced capacity controls. The R4 test showed that Advanced Work Schedules were unavailable on the tested lower plan, and the requested three-country utilisation model is not directly supported by a single Workspace work schedule.

Security

Business provides Google SSO according to ClickUp documentation. Enterprise adds Microsoft, Okta and SAML options. Business Plus is not equivalent to Enterprise for identity/security controls.

Custom roles

The actual Nordvik Screenshot #10 shows that Custom Roles are unavailable on the current plan and that ClickUp prompts an upgrade to Business Plus. This is a direct workspace evidence point.

UNVERIFIED / boundary notes

1. Exact Enterprise commercial pricing was not available; ClickUp displayed **Custom**.
2. Core pricing was not captured in the Nordvik Early access workspace.
3. The exact set of add-ons exposed to the Nordvik Early access workspace was not independently purchased or priced because no Add-ons tab was visible.
4. The newer Early access packaging is subject to change. The report therefore avoids copying older public AI add-on prices into the Nordvik quote.
5. Any capability not directly tested in the Nordvik workspace is not represented as tested.

New plans / AI packaging	https://help.clickup.com/hc/en-us/articles/42972527662359-New-plans-and-pricing-options	20 September 2026	VERIFIED
Pricing per user / plan	https://help.clickup.com/hc/en-us/articles/6303244318999-Pricing-per-user-role-and-plan	20 September 2026	VERIFIED
Public pricing context	https://clickup.com/pricing	20 September 2026	DOCUMENTED
Nordvik workspace pricing	Workspace Plans screen captured during the assignment	20 September 2026	VERIFIED

Workspace-specific Early Access pricing is labelled VERIFIED only where the Nordvik workspace Plans screen was directly observed. Public pricing is kept as contextual documentation and is not silently substituted for the workspace price.

AI Report

Client: Nordvik Consulting **Workspace:** Nordvik Consulting

Scope

ClickUp describes Brain AI as the umbrella for AI capabilities across the platform, including Brain, Super Agents, AI Skills, AI Fields, Autopilot Agents, data analysis, image generation, Talk-to-Text and AI Notetaker. Current ClickUp documentation also notes that some Workspaces use newer plans with more AI included.

This report distinguishes:

1. Capabilities actually tested against Nordvik data.
2. Capabilities documented by ClickUp but not tested in this assignment.
3. Pricing/availability that is unverified for the Nordvik Early access workspace.

Actual Nordvik tests

Test 1 — Brain workspace retrieval / billing analysis

Prompt

Using the Nordvik Consulting Clients workspace, identify the six billing tasks and summarize their invoice status, approved hours, and WIP value. Do not invent information that is not present in the workspace.

Observed result: Helpful and grounded.

Brain correctly returned:

- Discovery workshop — Invoiced — 38 approved hours — WIP \$0
- Build phase 1 — Ready to Invoice — 25 approved hours — WIP \$3,750
- Data migration — Ready to Invoice — 52 approved hours — WIP \$6,240
- Support retainer — Not Ready — 15 approved hours — WIP \$1,800
- Integration design — Invoiced — 22 approved hours — WIP \$0
- UAT & rollout — Ready to Invoice — 40 approved hours — WIP \$8,000

It also correctly summarized total unbilled WIP as **\$19,790**.

Assessment: Helpful for grounded retrieval and summarisation of configured workspace data.

Evidence: screenshots/09-ai-nordvik-answer.png

Test 2 — Missing accounting data

Prompt

What is the e-conomic invoice number for the Integration design task, and when was that invoice sent? Answer only from information available in the Nordvik Consulting ClickUp workspace.

Observed result: grounded limitation; the requested accounting output was unavailable.

Brain stated that no e-conomic invoice number or sent date existed in the task/workspace data. It referenced the existing Invoice Status and Invoiced Flag but did not invent an invoice number or date.

Assessment: Useful refusal-to-invent behaviour.

This is the useless / negative case for the tested Brain workspace-Q&A capability: the requested e-conomic invoice number and sent date were not present in ClickUp, so Brain could not provide the requested accounting output. It did not invent the missing data. This is recorded as a usefulness limitation, not as a hallucination.

Evidence: screenshots/10-ai-e-conomic-limitation.png if retained separately. The assignment's final Screenshot #10 remains the actual ClickUp plan limitation.

AI capability inventory

Capability	ClickUp documentation says	Nordvik test result	Status
Brain workspace Q&A	Context-aware answers over permitted Workspace data	Correct billing summary	VERIFIED / TESTED
Task summarisation / progress	Brain can summarise tasks and generate updates	Not separately tested	UNVERIFIED
AI writing	Brain can draft/edit content	Not separately tested	UNVERIFIED
AI Fields	AI Fields can generate task summaries/updates and other field content	Not separately tested	UNVERIFIED
AI Skills	Reusable saved instructions for Brain/Super Agents	Not separately tested	UNVERIFIED
Super Agents	Multi-step AI workflows with Workspace context	Not separately tested	UNVERIFIED
Autopilot Agents	Triggered agents can take configured actions	Not separately tested	UNVERIFIED
Data analysis	Brain/Super Agents can execute code in a sandbox to analyze data	Not separately tested	UNVERIFIED
AI Cards / dashboard AI	AI can support data/dashboard workflows	Dashboard calculations were tested, but not an AI-generated card	UNVERIFIED
Image generation/editing	Brain tools can generate/edit images	Not tested	UNVERIFIED
Talk-to-Text	Voice-to-text across ClickUp apps	Not tested	UNVERIFIED
AI Notetaker	AI meeting notes and related Q&A	Not tested	UNVERIFIED
Memory	Brain has customizable memory/preferences	Not tested	UNVERIFIED
External connections / MCP	Brain can use connected-app tools and MCP capabilities depending on plan	Not tested	UNVERIFIED

AI pricing / plan treatment

The Nordvik workspace's Early access Plans screen showed:

- **Business:** ClickUp Brain², premium models, unlimited standard models, 1,500 pooled credits/user/month.
- **Business Plus:** Brain², expanded premium model usage, unlimited standard models, 2,000 pooled credits/user/month.
- **Enterprise:** scaled AI, with 3,000 pooled credits/user/month shown in the workspace.
- **MAX:** maximum AI package. The workspace pricing screen and current public documentation use different AI-credit descriptions, so the exact Nordvik MAX credit allowance is treated as **UNVERIFIED unless the workspace screenshot is used as the direct evidence**.

The workspace did **not** show an Add-ons tab/button. Therefore the quote does not add older public Brain/Everything AI add-on prices to the Nordvik license cost.

ClickUp's documentation still describes separate Brain AI add-ons and AI credit pricing while also stating that some Workspaces have newer plans with more AI included. This packaging difference is recorded as a commercial uncertainty rather than silently reconciled.

What the AI testing proves

The actual test proves that Brain can:

- retrieve the six configured Nordvik billing tasks;
- read the configured invoice status;
- read approved hours;
- read formula-derived WIP values;
- distinguish invoiced tasks from unbilled tasks;
- avoid inventing an e-conomic invoice number when the information is absent.

It does **not** prove the quality of every ClickUp AI capability. The untested capabilities are explicitly marked **UNVERIFIED**.

The accounting-data test also does not prove that hallucinations can never occur. It only shows that, in this test, Brain did not invent unavailable accounting information.

Is AI worth paying for Nordvik?

Based on the testing completed, I would not recommend paying for AI as a separate purchase solely for Nordvik's billing workflow. Brain was useful for retrieving and summarising the configured billing data and for avoiding invented accounting information when the data was absent. However, only a limited part of ClickUp's wider AI surface was tested against the Nordvik workspace, so the evidence is not strong enough to justify an additional AI purchase on this workflow alone. If Nordvik selects a plan where Brain is already included, the tested retrieval and summarisation capability is a useful secondary benefit.

- [ClickUp Brain AI feature availability and limits](#)
- [What is ClickUp Brain AI?](#)
- [ClickUp Brain AI tools](#)
- [Perform data analysis with ClickUp Brain AI](#)
- [Create items with Brain AI](#)
- [Use Brain AI on tasks](#)
- [AI Fields availability](#)
- [AI add-ons](#)
- [New plans and pricing options](#)

Full AI surface coverage

The assignment asks for a helpful case and a wrong/useless case for every AI capability. Only Brain workspace-Q&A was actually exercised against Nordvik data in this workspace. The matrix below makes the remaining gaps explicit rather than inventing results.

Capability	Helpful case	Wrong / useless case	Status
Brain workspace Q&A	Nordvik six-task billing summary returned correctly	e-conomic invoice number/date unavailable; Brain did not invent it	VERIFIED / TESTED
Super Agents	Not executed against Nordvik	Not executed; no observed failure to report	UNVERIFIED
AI Skills	Not executed against Nordvik	Not executed; no observed failure to report	UNVERIFIED
AI Fields	Not executed against Nordvik	Not executed; no observed failure to report	UNVERIFIED
Autopilot Agents	Not executed against Nordvik	Not executed; no observed failure to report	UNVERIFIED
Data analysis	Not separately executed	Not executed; no observed failure to report	UNVERIFIED
Image generation	Not separately executed	Not executed; no observed failure to report	UNVERIFIED
Talk-to-Text	Not separately executed	Not executed; no observed failure to report	UNVERIFIED
AI Notetaker	Not separately executed	Not executed; no observed failure to report	UNVERIFIED

Testing limitation: This report does not claim that an untested AI capability is good or bad. The unverified rows are a documented coverage gap, not fabricated test results.

Commercial Quote

**Currency conversion used for planning: 1 USD = INR 95.89; rate checked on 19 September 2026. Source: <https://hdfcsky.com/news/rupee-slips-0-3percent-to-95-89-as-fed-hike-and-104-brent-test-rbis-96-red-line>. FX is variable and this is a planning conversion, not a fixed billing rate.

1. Nordvik seat model

The assignment specifies:

- 12 Project Managers
- 27 Delivery Consultants
- **39 total people**

For the working quote, all 39 people are modelled as Workspace seats. The seat-mix analysis below explains why no guest/limited-seat savings are assumed without workspace evidence.

ClickUp states that users in one Workspace cannot be on different plans.

2. License pricing observed in the Nordvik workspace

The Nordvik Plans screen showed the newer Early access structure:

Plan	Monthly billing	Yearly billing	39 users, monthly billing	39 users, yearly billing
Business	\$24/user/mo	\$16/user/mo	\$936/mo	\$7,488/year
Business Plus	\$36/user/mo	\$24/user/mo	\$1,404/mo	\$11,232/year
Enterprise	Custom	Custom	Custom	Custom
MAX	\$120/user/mo	\$100/user/mo	\$4,680/mo	\$46,800/year

3. Yearly-billing savings versus monthly billing

Plan	Monthly-billing annualised	Yearly-billing annual total	Difference
Business	\$11,232	\$7,488	\$3,744
Business Plus	\$16,848	\$11,232	\$5,616
MAX	\$56,160	\$46,800	\$9,360

Enterprise is not calculable without a sales quote.

4. AI/add-on treatment

The Nordvik workspace did not show an Add-ons tab/button.

Its newer plan cards showed ClickUp Brain² and different AI credit/model levels included within Business, Business Plus, Enterprise and MAX.

Therefore:

- **No separate legacy Brain/Everything AI charge is added to this quote.**
- AI packaging is marked as workspace-specific and subject to change.
- Any future AI add-on or credit purchase should be quoted only after the actual Nordvik billing screen exposes it.

5. Working commercial baseline

Working baseline: Business, billed yearly, for 39 seats.

Business yearly is used as the working quote baseline because the demonstrated billing workflow was successfully tested during the Business trial.

Business Plus is shown as an alternative because it adds advanced Workload capacity controls, Custom Roles, advanced time tracking/forms and higher API/automation limits.

This is a commercial baseline, not a claim that Business is the only possible solution.

6. One-time delivery estimates

These are **implementation estimates**, not ClickUp list prices.

Item	Planning estimate
ClickUp workspace setup, hierarchy, fields, views, dashboard, permissions and training	\$2,500
e-economic integration: invoice payload, authentication, mapping, invoice-number write-back and testing	\$4,000
Country-calendar utilisation workaround/custom capacity layer for Denmark/India/Sweden	\$3,000
Total one-time delivery estimate	\$9,500

These estimates should be validated with a real implementation scope before a customer contract.

7. Ongoing support estimate

Planning estimate:

- **\$600/month**
- **\$7,200/year**

This covers routine configuration support, monitoring of the integration, minor workflow changes and operational assistance. It is not a ClickUp fee.

8. First-year working quote — Business

Component	USD	INR @ 95.89/USD
Business annual licenses — 39 users	\$7,488	INR 718,024
ClickUp workspace setup	\$2,500	INR 239,725
e-economic custom integration	\$4,000	INR 383,560
Country utilisation custom work	\$3,000	INR 287,670
12 months support	\$7,200	INR 690,408
First-year working total	\$24,188	INR 2,319,387

Rounded customer-facing INR figure: **INR 23.19 lakh**.

9. Recurring cost from year two

If the same support arrangement continues:

- Business yearly license: **\$7,488/year**
- Support: **\$7,200/year**
- **Base recurring estimate: \$14,688/year**
- At INR 95.89/USD: approximately **INR 14.09 lakh/year**

Custom integration maintenance or major new features are excluded from the recurring support figure.

10. Business Plus comparison

If Nordvik selects Business Plus instead:

- Annual licenses: **\$11,232**
- Difference from Business: **+\$3,744/year**
- At INR 95.89/USD: approximately **+INR 359,012/year** at the stated planning rate

The higher plan provides advanced Workload capacity controls, Custom Roles, advanced time tracking/forms and higher API/automation limits.

It still does not natively provide independent Denmark/India/Sweden Workspace work schedules.

11. Commercial assumptions and exclusions

- Prices are based on the Nordvik workspace's displayed Early access pricing.
- Taxes are excluded from the working quote because the customer's tax treatment and billing location were not supplied.
- Enterprise is excluded from numeric comparison because it is custom-priced.
- MAX is shown for comparison, not selected for the working quote.
- Implementation/custom-build/support figures are planning estimates, not ClickUp vendor prices.
- FX is variable.
- e-conomic subscription/API/commercial charges, if any, are not included.
- No payment method or paid subscription was purchased during testing.
- Core plan pricing was not captured in the Nordvik workspace and is therefore not included in the working quote.

Seat-mix decision for the 39 people

Nordvik role	People	Working seat model	Quote treatment	Reason
Project Managers	12	Workspace Members	Included in 39-seat paid baseline	PMS need full delivery-management , reporting and workspace access.
Delivery Consultants	27	Workspace Members	Included in 39-seat paid baseline	Consultants need to work on delivery tasks and time/capacity workflows; a guest/limited-seat model was not demonstrated as sufficient in the Nordvik workspace.
Guest / limited-seat alternative	0 quoted	Not assumed	Not included in totals	The assignment requires role/permission fit, and the observed workspace did not provide enough evidence to claim a cheaper guest mix or price it safely.

Commercial decision: The working quote uses **39 paid Workspace seats** rather than inventing savings from guest/limited users. This is conservative and evidence-based. If Nordvik later confirms that some consultants can operate as guests/limited members without losing required delivery and time-tracking permissions, the quote should be recalculated from the actual billing screen.

Build Log

Project

Assignment: Assignment Two — ClickUp Solution Design **Client Scenario:** Nordvik Consulting **Platform:** ClickUp
Workspace: Nordvik Consulting **Purpose:** Build and test a ClickUp-based billing/work-management solution and document what is supported natively, what requires configuration, and what requires custom work.

Day 1 — 15 September 2026 — Workspace and Hierarchy Setup

Completed

Created the required ClickUp workspace structure for the Nordvik Consulting scenario.

Required hierarchy

Nordvik Consulting

-> Clients (Space)

-> Clients (Folder)

-> Client Alpha (List)

-> Client Beta (List)

-> Client Gamma (List)

The hierarchy matches the assignment requirements.

Client task structure

Created the six required billing task rows.

Client Alpha

1. Discovery workshop

- Worked Hours: 40
- Approved Hours: 38
- Hourly Rate: 150
- Invoice Status: Invoiced

2. Build phase 1

- Worked Hours: 25
- Approved Hours: 25
- Hourly Rate: 150
- Invoice Status: Ready to Invoice

Client Beta

3. Data migration

- Worked Hours: 60
- Approved Hours: 52
- Hourly Rate: 120
- Invoice Status: Ready to Invoice

4. Support retainer

- Worked Hours: 15
- Approved Hours: 15
- Hourly Rate: 120
- Invoice Status: Not Ready

Client Gamma

5. Integration design

- Worked Hours: 30
- Approved Hours: 22
- Hourly Rate: 200
- Invoice Status: Invoiced

6. UAT & rollout

- Worked Hours: 45
- Approved Hours: 40
- Hourly Rate: 200
- Invoice Status: Ready to Invoice

Expected calculations

Hours Variance

Worked Hours - Approved Hours Expected total: **23 hours**

WIP Hours

Approved Hours for jobs that are not Invoiced Expected total: **132 hours**

WIP Value

Approved Hours × Hourly Rate for jobs that are not Invoiced. Expected total: **19,790** The **Integration design** task is an important test case because it has: Worked Hours = 30 Approved Hours = 22 Variance = 8 Invoice Status = Invoiced WIP Hours = 0 WIP Value = 0 This verifies that billed work should not remain in WIP even when a variance exists.

Issue / observation

The initial workspace setup was completed without requiring paid features.

Screenshot

- Screenshot #1 — Space, Folder and three Client Lists completed.

Day 2 — 16 September 2026 — Custom Fields and Billing Data

Completed

Created the required billing Custom Fields at the **Clients Folder** level so that the fields are available across the Client Alpha, Client Beta and Client Gamma Lists.

Custom Fields created

Input fields

- Worked Hours — Number
- Approved Hours — Number
- Hourly Rate — Number
- Invoice Status — Dropdown

Invoice Status options: Invoiced Ready to Invoice Not Ready

Helper field

- Invoiced Flag — Number

The helper field was required because ClickUp Formula Fields do not directly support text Custom Fields such as the Invoice Status dropdown.

Calculated fields

- Hours Variance — Formula
- WIP Hours — Formula
- WIP — Formula

Formula logic

Hours Variance

Worked Hours - Approved Hours

Invoiced Flag

1 when Invoice Status = Invoiced 0 otherwise

WIP Hours

IF Invoiced Flag = 1 THEN 0 ELSE Approved Hours

WIP

IF(Invoiced Flag = 1, 0, Approved Hours × Hourly Rate) The WIP formula currently used in ClickUp is: IF(field("Invoiced Flag") = 1, 0, field("Approved Hours") * field("Hourly Rate"))

Important ClickUp limitation discovered

ClickUp Formula Fields do not directly support Custom Fields containing text. Because Invoice Status is a dropdown/text-based Custom Field, the status could not simply be referenced directly inside the Formula Field. A numeric Invoiced Flag helper field was therefore created.

Configuration workaround

Two ClickUp Automations were created.

Automation 1

Trigger: Invoice Status changes to Invoiced **Action:** Set Invoiced Flag to 1

Automation 2

Trigger: Invoice Status changes from Invoiced to another status **Action:** Set Invoiced Flag to 0

Testing

The automation was tested using the Build phase 1 task. Initial state: Invoice Status = Ready to Invoice Invoiced Flag = 0 WIP = 3,750 Changed status to: Invoiced Result: Invoiced Flag = 1 WIP = 0 Changed status back to: Ready to Invoice Result: Invoiced Flag = 0 WIP = 3,750 The dynamic WIP behaviour worked as expected. The final task state was restored to: Build phase 1 = Ready to Invoice

Issue encountered

Directly using the Invoice Status text/dropdown field inside the formula was not supported.

Resolution

Used a numeric helper field plus Automations.

Screenshots

- Screenshot #2 — Custom Field Manager showing the billing fields and folder-level configuration.
- Screenshot #3 — WIP Formula editor showing the working WIP formula.

Day 3 — 17 September 2026 — Reporting Views and Invoice Status Board

Completed

Created reporting views to make the billing information easier to inspect.

View 1 — Hours Variance

Created a List view named: Hours Variance The view displays the billing information required to inspect the variance calculation. Relevant columns include:

- Name
- Worked Hours
- Approved Hours
- Hourly Rate
- Hours Variance
- Invoice Status

All six required tasks are visible.

Individual variance values

Task	Worked	Approved	Variance
Discovery workshop	40	38	2
Build phase 1	25	25	0
Data migration	60	52	8
Support retainer	15	15	0
Integration design	30	22	8
UAT & rollout	45	40	5

Expected total: **23 hours** At this stage, the final screenshot still needed the ClickUp column calculation total to be made visible. This was completed during Day 4 after the Business trial was started.

View 2 — WIP Report

Created a List view named: WIP Report Applied the filter: Invoice Status $\neq$ Invoiced The resulting report contains four tasks.

Task	Approved Hours	WIP Hours	WIP
Data migration	52	52	6,240
Build phase 1	25	25	3,750
Support retainer	15	15	1,800
UAT & rollout	40	40	8,000

Expected totals: WIP Hours = 132 WIP Value = 19,790 The two Invoiced tasks are correctly excluded: Discovery workshop Integration design This confirms the required behaviour that invoiced work should have zero WIP.

View 3 — Invoice Status Board

Created a Board view named: Invoice Status Board Grouped the board by: Invoice Status Current groups:

Invoiced

- Discovery workshop
- Integration design

Ready to Invoice

- Data migration
- UAT & rollout
- Build phase 1

Not Ready

- Support retainer

The board correctly reflects the current invoice statuses.

Dynamic WIP testing

The Build phase 1 task was temporarily changed: Ready to Invoice → Invoiced The WIP changed to zero and the task was removed from the filtered WIP Report. The task was then changed back: Invoiced → Ready to Invoice The WIP value returned to: 3,750 The final state was restored to the required assignment data.

Issues / observations

The reporting views themselves work correctly. However, the aggregate column calculation feature is not available on the current Free Forever plan. This limitation was tested further on Day 4.

Screenshot

- Screenshot #6 — Invoice Status Board completed.

Day 4 — 18 September 2026 — Plan, Billing, Business Trial and Dashboard Testing

Completed

Tested the current ClickUp plan, the Column Calculations limitation, the available Business trial, and the required billing dashboard calculations.

Initial Column Calculation limitation

On the Free Forever plan, opened the Hours Variance view and attempted to calculate: Hours Variance → Sum ClickUp displayed: Column Calculations isn't available on your current plan and: Upgrade to Business to unlock Column Calculations This confirmed that Column Calculations were restricted on the Free Forever plan.

Billing / Upgrade investigation

Opened: Workspace Settings → Billing The workspace initially showed: Free Forever 1 seat \$0 / seat No payment method was configured. The Upgrade / Plans page showed:

- Core
- Business
- Business Plus
- Enterprise

The Business plan displayed: \$16/user/month billed yearly The paid checkout screen showed: Business Plan (1 seat) = \$192/year Tax (18%) = \$34.56 Billed Today = \$226.56 No payment details were entered and no paid upgrade was completed.

Business free trial discovered

While adding a Calculation card to the dashboard, ClickUp displayed an explicit Business trial option. The trial prompt stated:

- 15 day free trial
- No credit card required
- Business features would be available during the trial
- The displayed price to continue after the trial was \$16/month

The **Start FREE trial** option was selected. No credit card or payment method was added. This provided a controlled way to test the paid features required by the assignment without purchasing a subscription.

Column Calculations test after starting the trial

After starting the Business trial, created Calculation cards using the `clients` data source. The following calculations were successfully tested against the actual Nordvik Consulting task data:

Total Hours Variance

Measure: Hours Variance Calculation: Sum Result: 23

Total WIP Hours

Measure: WIP Hours Calculation: Sum Result: 132

Total WIP Value

Measure: WIP Calculation: Sum Result: 19,790 All three results matched the expected values from the configured Formula Fields and six required tasks.

Dashboard created

Created the Nordvik billing dashboard with three headline Calculation cards: Total Hours Variance = 23 Total WIP Hours = 132 Total WIP Value = 19,790 The card titles were renamed so that each metric is clearly identifiable. The dashboard provides a simple management-level view of billing leakage and work in progress.

Screenshot evidence

- Screenshot #4 — Hours Variance view with the ClickUp calculated total of 23.
- Screenshot #7 — Dashboard showing the three headline numbers: 23, 132 and 19,790.

Result

The required aggregate calculations were successfully tested during the Business free trial. The earlier Free Forever limitation remains important evidence for the plan comparison and commercial assessment. No paid subscription was purchased. No payment method was added.

Day 5 — 19 September 2026 — R4 Country Holiday Calendars and Utilisation

Completed

Tested ClickUp's Work Schedule capability against Nordvik Consulting's requirement for separate public-holiday calendars for Denmark, India and Sweden, with staff utilisation respecting each person's country.

Test performed

Opened: Nordvik Consulting → Settings → Features → Work Schedule The workspace showed the following restriction: Advanced Work Schedules isn't available on your current plan Upgrade to Business Plus to unlock Advanced Work Schedules No paid upgrade was made.

Important requirement distinction

Nordvik's requirement is not only to display public holidays. The requirement is that each person's utilisation/capacity calculation should respect their own country's holiday calendar. ClickUp can display national holiday calendars in Calendar view, but the Workspace work schedule used for Workload/utilisation does not provide independent country-specific capacity calendars for Denmark, India and Sweden within one Workspace. The tested workspace also requires Business Plus for Advanced Work Schedules.

Result / observation

The test confirmed that the requested per-country utilisation behaviour is not available as a straightforward native setup in the tested workspace. This should be treated as a limitation rather than represented as a working native feature. The final feasibility bucket is **CUSTOM BUILD** because separate country calendars driving utilisation would require a workaround, custom logic, or an external solution.

Evidence

- Screenshot #8 — Country holiday / utilisation limitation showing the Advanced Work Schedules upgrade requirement.
- File: screenshots/08-country-holidays.png

Customer-facing explanation

ClickUp can show the three countries' holidays, but making each employee's utilisation automatically follow their own country's holiday calendar requires a workaround or additional custom solution.

Day 6 — AI Testing and Final Documentation Audit

Completed

Completed the documented AI testing against the Nordvik workspace and performed the final documentation/evidence audit.

AI testing

Tested Brain against the actual Nordvik billing data.

Helpful case

Prompted Brain to identify the six billing tasks and summarise invoice status, approved hours and WIP value. Observed result:

- All six required tasks were identified.
- Invoice statuses matched the configured workspace.
- Approved hours matched the task data.
- WIP values matched the Formula Fields.
- Total unbilled WIP was correctly summarised as **\$19,790**.

Negative / edge case

Asked Brain for an e-conomic invoice number and sent date for the Integration design task. The workspace did not contain that information. Brain correctly stated that the information was unavailable rather than inventing an invoice number or date. This was recorded as a useful grounded limitation, not as a hallucination failure.

AI limitation identified

The wider ClickUp AI surface was documented, but most capabilities were not independently tested against the Nordvik workspace. Those capabilities remain explicitly marked **UNVERIFIED** rather than being presented as tested results. This preserves research integrity and avoids inventing AI failures or successes.

Final documentation / evidence issues found

Issue 1 — WIP evidence

The WIP Report evidence needed both headline totals to be visibly supported in the final screenshot section. Resolution:

- Used the original ClickUp WIP Report evidence.
- Combined it with the original ClickUp dashboard calculation evidence showing **132 WIP hours** and **\$19,790 WIP value**.
- No ClickUp values were fabricated or edited.

Issue 2 — AI conclusion

The AI report initially documented the test results but did not explicitly answer whether AI was worth paying for Nordvik. Resolution: Added a customer-facing conclusion based only on the AI testing actually completed. The conclusion states that a separate AI purchase is not justified solely by the tested billing workflow, while Brain is a useful secondary benefit if already included in the selected plan.

Final feasibility buckets

The final feasibility conclusions were recorded as:

- R1 Hours Variance — **CONFIGURATION**
- R2 WIP Reporting — **CONFIGURATION**
- R3 e-conomic Accounting Sync — **CUSTOM BUILD**
- R4 Country-specific Utilisation — **CUSTOM BUILD**
- R5 Pricing — **NATIVE**

Result

The final evidence set contains exactly 10 required screenshots. The documentation explicitly distinguishes:

- what was tested;
- what was documented from official sources;
- what remains unverified;
- what requires configuration;
- what requires custom work.

No unsupported AI results or fabricated product failures were added.

Current Status

Completed

- Nordvik Consulting workspace
- Clients Space
- Clients Folder
- Client Alpha List
- Client Beta List
- Client Gamma List
- Six required task rows
- Worked Hours field
- Approved Hours field
- Hourly Rate field
- Invoice Status field
- Invoiced Flag helper field
- Hours Variance Formula
- WIP Hours Formula
- WIP Formula
- Invoice Status Automations
- Dynamic WIP testing
- Hours Variance view
- WIP Report view
- Invoice Status Board
- Business / Free plan limitation tested
- Billing / upgrade screen inspected
- No paid upgrade made
- 15-day Business free trial started without a credit card
- Dashboard Calculation cards tested
- Nordvik Billing Dashboard completed
- R4 country holiday / utilisation limitation tested
- Brain AI tested against Nordvik billing data
- Final AI value conclusion added
- Final documentation audit completed

Screenshot progress

1. Space / Folder / three Lists

2. Custom Fields
3. WIP Formula
4. Hours Variance with total = 23
5. WIP Report with totals = 132 and 19,790
6. Invoice Status Board
7. Dashboard headline numbers
8. Country holiday / utilisation limitation
9. AI answering a Nordvik question
10. Actual error / plan limitation

Final Documentation Audit

The final screenshot set is complete: all 10 required screenshots are captured. Final feasibility buckets:

- R1 Hours Variance — CONFIGURATION
- R2 WIP Reporting — CONFIGURATION
- R3 e-conomic Accounting Sync — CUSTOM BUILD
- R4 Country-specific Utilisation — CUSTOM BUILD
- R5 Pricing — NATIVE

The final Screenshot #10 is the actual Custom Roles plan limitation:

"Custom Roles isn't available on your current plan"

and

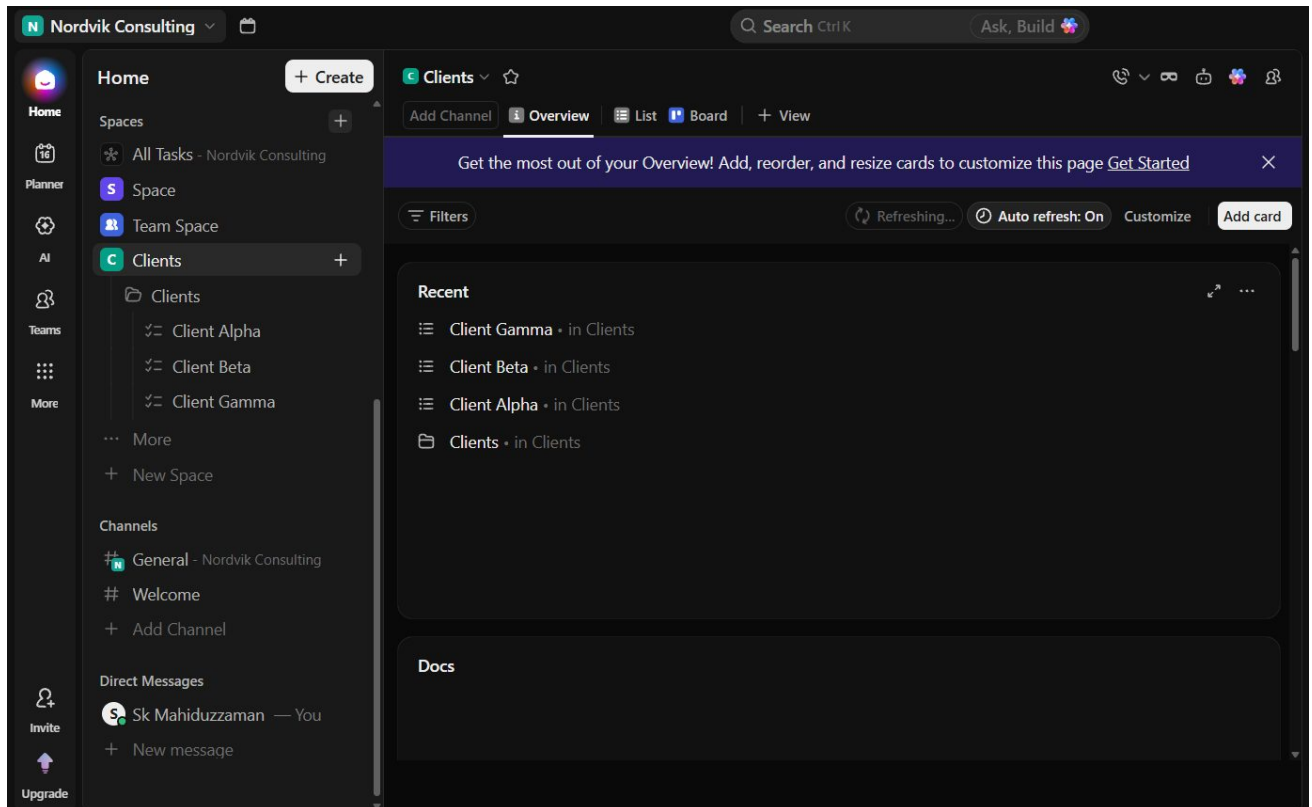

"Upgrade to Business Plus to unlock a Custom Role."

The Free Forever Column Calculations limitation remains documented as historical Day 4 evidence and is not used as final Screenshot #10.

Screenshot Evidence — Exactly 10 Screenshots

The following pages contain the ten final evidence screenshots. Original image files are also included separately in the submission ZIP.

Screenshot 3 — WIP Formula Field

The screenshot displays the ClickUp 'Clients' workspace in 'List' view. A modal for configuring a 'WIP' (Work In Progress) formula field is open over the task list. The task list includes items like 'Discovery workshop', 'Data migration', and 'Integration design'. The modal allows defining the formula for the 'WIP' field based on 'Invoiced Flag' and 'Approved Hours'.

Name	Hourly Rate	Invoice Status	Hours Variance	Invoiced Flag	WIP Hours	WIP
Discovery workshop		Invoiced	2	1		
Data migration		Ready to Invoice	8	0		
Integration design		Invoiced	8	1		
Build phase 1		Ready to Invoice	0	0		
Support retainer		Not Ready	0	0		
UAT & rollout		Ready to Invoice	5	0		

WIP Formula Field Configuration Modal:

- Field name:** WIP
- Formula definition:** `IF(field("Invoiced Flag") = 1, 0, field("Approved Hours") * field("Hourly Rate"))`
- Buttons:** Advanced formulas, Cancel, Save

Screenshot 5 — WIP Report evidence + supporting ClickUp calculated totals = 132 WIP hours and \$19,790

Screenshot 6 — Invoice Status Board

Screenshot 7 — Dashboard headline numbers

Screenshot 8 — Country holiday / utilisation limitation

The screenshot displays the Nordvik Consulting dashboard interface. On the left is a dark sidebar with navigation links: Home, Teams, Planner, AI, Tools, Dashboard, and More. The 'All settings' menu is expanded, showing options like Teams, Plans, Billing, AI Usage, Security & Permissions, Audit Logs, Trash, Features, Custom Field Manager, Tag Manager, Template Center, Automations Manager, AI Notetaker, Emojis, Spaces, Task Types, Work Schedule, and Log out. The main content area has a dark background and features a top banner that reads 'Advanced Work Schedules isn't available on your current plan' and 'Upgrade to Business Plus to unlock Advanced Work Schedules'. Below this, there are two columns. The left column, titled 'Advanced Work Schedules', explains that users can unlock tailored working hours and includes a calendar visualization showing a 7-day week with bars for each day. The right column, titled 'Business Plus', shows a price of '\$24 user/mo' and a 'Continue to checkout' button. Below the button is a '30 Day Money-Back Guarantee' and a list of features: Advanced Work Schedules, Unlimited SyncUp AI Notes, 100,000 Automations / mo (with a '\$300 value' tag), Advanced Time Tracking, Advanced Forms, Custom Permissions (1 Role), Advanced Custom Fields Manager, Doc Wikis, and Everything in Business. At the bottom of the right column, there is a 'ClickUp Brain?' section with 'Expanded Premium Model Usage' and 'Unlimited Standard Models *', and a '2,000 credits / user / mo AI Assign' limit.

Nordvik Consulting

Advanced Work Schedules isn't available on your current plan

Upgrade to Business Plus to unlock Advanced Work Schedules

Advanced Work Schedules
Unlock the ability to set tailored working hours for your team. Adjust schedules to fit your unique workflow and optimize productivity.

[Continue to checkout](#)

30 Day Money-Back Guarantee

- ✓ Advanced Work Schedules
- ✓ Unlimited SyncUp AI Notes
- ✓ 100,000 Automations / mo **\$300 value**
- ✓ Advanced Time Tracking
- ✓ Advanced Forms
- ✓ Custom Permissions (1 Role)
- ✓ Advanced Custom Fields Manager
- ✓ Doc Wikis
- ✓ Everything in Business

ClickUp Brain?

- ✓ Expanded Premium Model Usage
- ✓ Unlimited Standard Models *

2,000 credits / user / mo AI Assign

Screenshot 9 — ClickUp Brain answering the Nordvik billing question

The screenshot displays the ClickUp Brain interface within the Nordvik Consulting workspace. The left sidebar contains navigation options: Home, AI (with a 'Create' button), Planner, Analytics, Connections, Super Agents, Create Agent, Agent Activity, All Agents, My Agents, Recent Chats (listing 'Billing Task Summary' and 'Onboarding: IT Setup'), and an Upgrade section showing 'Unlimited Brain AI uses' and '480 Credits left'.

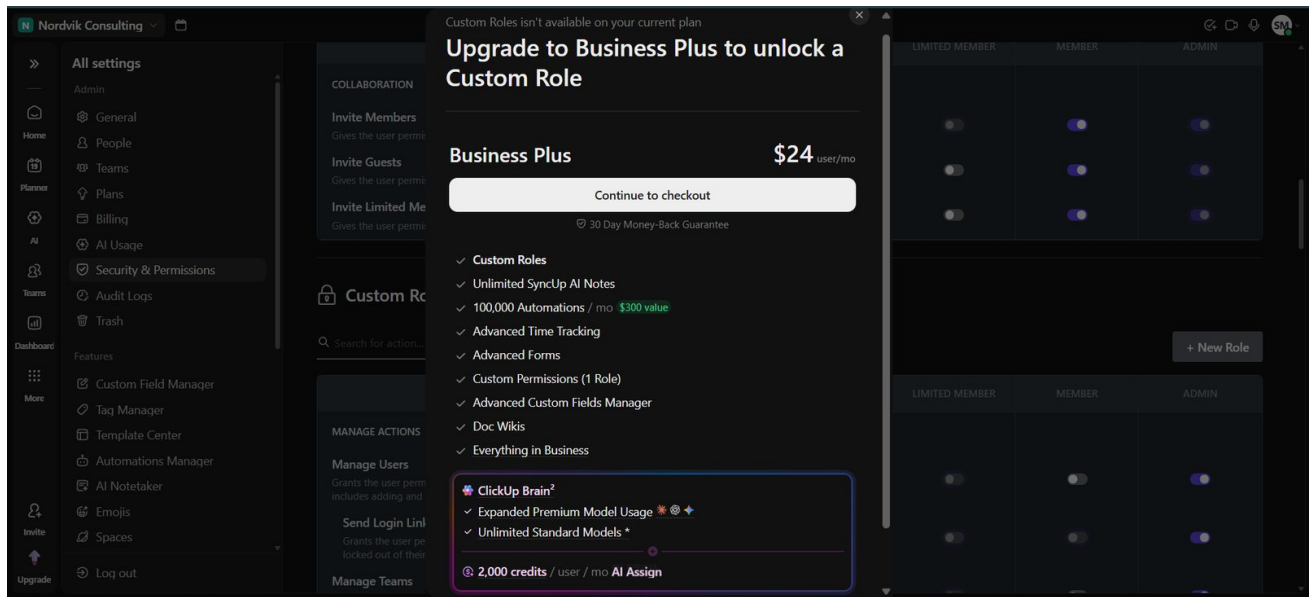

The main chat area shows a conversation with 'Sk Mahiduzzaman' at 8:11 PM. The user's message asks to identify six billing tasks and summarize their status, approved hours, and WIP value. The AI response, 'Brain?', indicates it finished in 6 steps and provides a summary of six billing tasks across the 'Clients > Location Overview' space:

- Client Alpha**
 - Discovery workshop (TO DO) — Invoiced, 38 approved hrs, WIP \$0 (already billed)
 - Build phase 1 (TO DO) — Ready to Invoice, 25 approved hrs, WIP \$3,750
- Client Beta**
 - Data migration (TO DO) — Ready to Invoice, 52 approved hrs, WIP \$6,240
 - Support retainer (TO DO) — Not Ready, 15 approved hrs, WIP \$1,800
- Client Gamma**
 - Integration design (TO DO) — Invoiced, 22 approved hrs, WIP \$0 (already billed)
 - UAT & rollout (TO DO) — Ready to Invoice, 40 approved hrs, WIP \$8,000

Quick takeaway: Two tasks are fully invoiced (Discovery workshop, Integration design) with WIP zeroed out. Three are ready to invoice with a combined **\$17,990 in unbilled WIP**. Support retainer is the only one marked "Not Ready," sitting at \$1,800 WIP. Total approved hours across all six: **192 hrs**.

Below the summary, three suggested actions are provided: 'Build an interactive billing dashboard from this data', 'Post a WIP summary to a Chat channel for the team', and 'Flag Support retainer: what's blocking it from Ready?'. At the bottom, a text input field prompts 'Tell AI what to do next' with a 'Skills' button and a 'Max' dropdown.

Screenshot 10 — Custom Roles unavailable; Business Plus upgrade boundary

Final Submission Checklist

- ✓ Headline numbers are 23 hours variance, 132 WIP hours and \$19,790 WIP value.
- ✓ Both invoiced jobs show zero WIP.
- ✓ Dynamic Invoice Status testing was completed and documented.
- ✓ Plan comparison distinguishes VERIFIED, DOCUMENTED and UNVERIFIED evidence.
- ✓ Feasibility verdicts use only the required NATIVE, CONFIGURATION and CUSTOM BUILD buckets.
- ✓ AI report contains one helpful and one useless/negative case for the tested Brain workspace-Q&A; capability, without inventing a hallucination.
- ✓ Untested AI capabilities remain explicitly marked UNVERIFIED.
- ✓ Build Log records the implementation and every limitation actually observed during the build; no unsupported failure is fabricated.
- ✓ The submitted source documents in the ZIP are the same cleaned versions used to render this PDF.
- ✓ Plan Comparison includes a source/link, checked date and evidence label register, and the Date checked column is preserved in the rendered PDF.
- ✓ Build Log Day 1-Day 5 entries are dated without inventing unsupported incidents.
- ✓ The quote explicitly maps 12 Project Managers + 27 Delivery Consultants to the 39-seat working model and explains why no guest/limited-seat savings are assumed without evidence.
- ✓ FX conversion states the rate, date and source used.
- ✓ Exactly 10 required screenshots are included; Screenshot #5 combines the original WIP report with the original ClickUp dashboard calculation evidence so both 132 WIP hours and \$19,790 are visibly supported.
- ✓ Screenshot #10 is the actual Custom Roles → Business Plus limitation.
- ✓ No paid ClickUp subscription was purchased during testing.
- ✓ License costs are separated from implementation, integration and support estimates.
- ✓ The report contains dated research/build evidence where the assignment requires it; it does not hide required dates.
- ✓ AI capabilities that were not actually exercised remain UNVERIFIED; no fabricated AI result or hallucination is claimed.
- ✓ Build Log records observed limitations only; no invented failure is added merely to satisfy a scoring requirement.
